SCSEP GPMS

Release Notes – Version 26.4

Release Date: November 20, 2026

These Release Notes provide information about GPMS Release 26.4, which includes several new features enhancements and issue resolutions.

New Features:

- **Current/Exited Report**
  - Added a **Case Status** column to the Current/Exited Report. The column displays "Active On-Break" when a participant is currently on an approved break.
- **Updated Exit Processing**
  - When an exit date is modified, GPMS removes any completed follow-up dates that fall after the applicable follow-up expiration date and recalculates the follow-up schedule based on the revised exit date.
    - **Example:**
      - Original exit date: January 15, 2026
      - Follow-up 1 completion date: June 25, 2026
      - Revised exit date: May 13, 2025
      - Result: GPMS removes completed follow-up dates that fall after the applicable expiration dates and recalculates the follow-up schedule using the modified exit date.

Enhancements:

- Improved Return to Service processing by correcting validation for participants who returned to service and later exit for an excludable reason.
- When editing a Placement Service record, users now see only fields relevant to the placement service; assignment-related fields are no longer displayed.
- Updated WIPS Addendum file generation to submit PY26 AP/MP data instead of PY25 AP/MP data.
- Updated the Priority of Service screen so the **Clear All** button also clears the Formerly Incarcerated selection.

Resolved Issues:

- Fixed an issue that prevented services provided to participants during placement from appearing in their participant records.

- Resolved an issue in which editing a previous recertification automatically approved pending recertifications.
- Resolved an issue where the case manager was able to edit an approved recertification.
- Fixed an issue that incorrectly set the Durational Limit Date to the current system date when a participant had zero days remaining and the exit reason was not Durational Limit.
- Fixed an issue that was preventing selected Job Codes from being saved on the Assignment tab for some cases.
- Corrected the Break Extract output so that the First Name and Last Name columns appear in the proper order.

Known Issues:

- None.
