SCSEP GPMS

Release Notes – Version 2.6.1

Release Date: May 17, 2024

This release focuses on addressing the calculations for the Quarterly Progress Report (QPR) and providing accurate data on the QPR. In addition, the changes to the calculation determine the values needed for the appropriate Participant Individual Records Layout (PIRL) for transmission to the Workforce Integrated Performance System (WIPS), scheduled to occur later this year. **Note**: The data displayed on the Internal QPR is for the reporting period selected, not the current quarter in which the report is being generated.

New Features

The Internal QPR has been redesigned to reflect the following:

- Measure **D.2f. Percentage of Placements with Benefits** – displays 0% instead of N/A if the numerator is zero (0) and the denominator is not zero (0).
- Measure **D.2b. OJE Placement** does not include self-employment placements.
- Measure **D.2d. 2d. Percentage of Placements in the 2nd and 4th Quarters with the Same Employer** – displays 0% instead of N/A if the numerator is zero (0) and the denominator is not zero (0).

Enhancements

The values on the Internal QPRs now accurately reflect the data within GPMS. The calculation of the data of each section within the QPR has been revisited and the accuracy of the data verified. Outlined below is a summary of the areas that have been addressed in the Internal QPR.

- Participant Summary Information
- SCSEP Core Measures
- Participant Level Information
- Summary Information

Known Issues

- The correct value for Other Reason for Exit is not correct in the PIRL. This will be corrected in a future release. The correct data is however being displayed on the Internal QPR.
- The correct value for records with multiples services is not in the PIRL. This will be corrected in a future release.

- Most in Need Characteristics does not reflect the correct information when determining the age of the participant. This will be corrected in a future release.
- Most in Need as a SCSEP Core Measures does not reflect the correct information for the rate and numerator. This will be corrected in a future release.

Correction to Release 2.6 Notes

- Post-2.6 deployment, any new Organization Function added to an organization (i.e., Host Agency, Employer, Service Provider) will now be displayed on the UI. A data fix slated for release 2.7 will address the display of multiple Organization Functions in existence *prior* to 2.6 deployment.
