Release Notes – Version 2.8.1

Release Date: August 8, 2024

This release focuses on changes made to the Quarterly Progress Report (QPR), as well as other enhancements.

New Features

- The Average Project Duration calculation process no longer includes time after a participant record has been locked due to duration.
- Internal and Nationwide QPRs can now be frozen on a quarterly basis by Program Analysts only. The user community will be notified before the QPRs are frozen.
- Users will be able to download the Nationwide EOY QPR once it is frozen.
- Users will only be able to view QPRs for quarters and program years that are frozen in the View Frozen QPR card. Frozen program years and quarters will no longer appear in the dropdowns included in the Generate Internal QPR or Nationwide QPR card.
- We addressed inconsistencies with values appearing on the QPR form during the freezing process.

Enhancements

- The page header for generating the Internal QPRs is now "Generate Internal QPR Reports."

Fixes

- The applicant signature date is no longer being updated with a recent date. The original signature date is now being retained by the system.
- All active participants are now displayed on the Participant Actions Report for the IEP filter and for the dates selected, on both UI and the export file.

Known Issues

- None.
