SCSEP GPMS

Release Notes – Version 3.1

Release Date: December 6, 2024

GPMS Release 3.1 addresses new features, enhancements including the WIPS QPRs, and bug fixes discovered during the previous release.

New Features

- Users can input the number and percentage for Training, OJE, and Wages on the **Add New Service** screen by selecting **ADD ASSIGNMENT SERVICE** on the sub-menu:
  - Total amount paid to a training provider, for the provision of training services (other than the amount of reimbursement provided to an employer).
  - Total wages paid to a participant or reimbursed to an employer for OJE.
  - Percentage of services reimbursed for On the Job Training Experience (OJE)
  - Who the OJE wages are being paid by.
  - Job Code for which training is provided. This is not seen on the Add Placement Service screen.
  - Participant's Workers Compensation Code in training
- The entries made on the **Add New Service** screen can be edited after the original entry is saved. Note: Some field names may be shortened on the screen, but the full names are available in the tooltip.

Enhancements

- The FEIN is now limited to nine (9) numeric characters; special characters are not allowed in this field.
- The Grantee and Sub-Grantee codes have been added to the Participant Actions report detail and are visible in both the User Interface (UI) and the exported version of the report.
- The extension history is now available on the UI for all program years in which an extension was granted. Users can view this information by selecting the Extension menu in the sub-header, choosing the program year and clicking the link: **View Extension**. In addition, the system recalculates the Durational Limit Date (DLD) when an extension is added. The DLD is accurately displayed on the UI.
- The supervisor and contact information are now displayed in the Assignment by Host Agency report and visible in both the UI and the exported version of the report. The CSA title field has also been added to the report.
- Previously, users were able to select a county name for applicants and or participants residing in the state of Connecticut.   With this release, users will only be able to select a

Planning Region and not a county for the state of Connecticut. The list of Planning Regions is available in the County field on the Intake page.

- Program years with no associated authorized positions are now hidden in the **Program Year** list on the Grantee Authorized Position screen.

System updates for upcoming WIPS reporting (features will not be visible in GPMS until January 2025)

- The label on the card that generates the WIPS QPR on the Admin Console has been changed from **Manage QPR reports** to **Generate WIPS**. This change is reflected on all screens related to the WIPS QPRs.
- The verbiage on WIPS QPR instructions has been standardized to state **WIPS QPR** instead of **QPR**.
- The WIPS QPR addendum report can be generated and downloaded via the **Generate WIPS QPR Addendum** card on the **Admin Console**. Note: Only Program Analysts and Grantee Administrators will have access to this card.

Fixes

- The system will no longer time out when users are downloading the Waiver of Durational Limit (WDL) report containing more than 1,000 active participants.
- The Approve Recertification button is now accessible to Supervisors, allowing them to approve recertifications without receiving notifications.
- If no value is present in the goals section of the QPRs, the section will now be blank instead of marked as N/A. If a value is present, it will be rounded to one decimal.
- A UI error encountered when selecting a Sub-Grantee on the Participant Waiver Factor screen has been fixed.
- Only Paid Sick hours and PRA Activity hours are available on the UI when a participant is on break for the entire quarter and exits on the same date the break ends.
- The **Participant's Job Codes** are now listed alphabetically on the **Add Assignment** and **Other Enrollment Information** screens.
- The Participant Actions Report now accurately reflects the **Due Date of Next Recertification, Recertification Status** and **Date of Recertification**.
- Notifications for approved recertifications being rejected have been corrected. Additionally, users will no longer receive notifications for completed physical exams and IEPs.
- Comments are only required during the recertification process if the user is overriding the system's eligibility determination.

Known Issues

- None.
