SCSEP GPMS

Release Notes – Version 25.4

Release Date: December 19, 2025

GPMS Release 25.4 addresses new features, enhancements, and bug fixes discovered since the previous release.

New Features

- None

Enhancements

- When editing an **Approved Break in Service**, users can no longer edit the start and/or end date to overlap with any other Approved Break in Service.
- All users can now delete **Training and Service** records attached to a **Community Service Assignment**.
- An update has been made to the UI in the **Related Actions** tab. Users will no longer see the **Add Exit** button, after an exit has already been added to a case. Users will still be able to **Modify Exit** if an exit already exists for a case.
- Users are no longer able to enter fractional hours in the **Paid Hours Module**. This change is required to align GPMS data entry with WIPS data requirements. Paid Hours must be rounded to the nearest hour. For example, if a participant worked 10.6 hours in a CSA, users should enter 11 hours in the **Paid Hours Module**.

Fixes

- For transferred cases, the recipient grantee will now see the correct due date and status for recertification on the **Participant Required Actions Report**.
- Users will now see the correct status for recertification on the **Participant Required Actions Report**. Previously users would see "Past Due" when recertification has been completed for some cases.
- Grantee Administrators are no longer able to create "Read Only Global" user accounts. Grantee Administrators will still be able to manage all Case Manager, Case Supervisor, and Sub-Grantee Administrator users for their Grantee through the Admin Console.
- A correction has been made to the validation error messages in **Approved Break in Service**. Users will no longer see the incorrect error message when editing end dates for a closed break in service, and there are no overlaps with any other break in service.
- Users can no longer enter **Paid Hours** when a case is in "Locked" status.

- The **Employer Contact** column on the **Follow Up Details Report** export, has been corrected. Users will see the same value for **Employer Contact** in both the UI and in the exported report.
- An issue that caused some grantee administrators to receive an error when approving recertifications has been resolved.
- An error has been corrected in the **Paid Hours Module**. All Paid Hours entries are now saving correctly for all users, when multiple pages are entered and saved in the same session.

Known Issues

- None
